

Task-1

Description:

Responsive Business Homepage

Objective

Create a fully responsive business website using media queries and Flexbox layouts.

Requirements

Build

- Create a responsive business homepage that adapts to different screen sizes.

Media Queries Implementation (Must Include All)

- **Desktop layout:** 1200px and above
- **Tablet layout:** 768px to 1199px
- **Mobile layout:** 320px to 767px
- **Print stylesheet** for printing optimization

Flexbox Layout Requirements

- Header with logo and navigation using display: flex
- 3-column services section using Flexbox
- 2-column testimonials section with flex alignment
- Footer with 4 flex items (contact info sections)

Responsive Features Required

- Navigation menu collapses to hamburger on mobile
- Service cards stack vertically on mobile
- Images resize proportionally using max-width: 100%
- Typography scales appropriately across breakpoints
- Content reflows without horizontal scrolling

Technical Implementation

- Viewport meta tag for mobile optimization
- Flexible images and media using CSS
- Flexbox properties:
 - justify-content
 - align-items
 - flex-wrap
- Mobile-first approach with min-width media queries
- Touch-friendly button sizes (44px minimum)

Deliverables

- HTML file with semantic structure
- CSS file with complete responsive design
- Screenshots of all 3 breakpoints (desktop, tablet, mobile)
- Testing documentation across different devices

Code:

Task1.html:

```
<!DOCTYPE html>
<html lang="en">

}
```

Output:

Task1 (Desktop View)

The screenshot shows a desktop web application interface. At the top, there is a header bar with the text "PersonName" on the left and navigation links "Work", "About", "Skills", and "Contact" on the right. Below the header is a section titled "My Projects" with the subtitle "A few things I've built lately." This section contains six colored boxes arranged in a 2x3 grid: "Project Alpha" (teal), "Project Beta" (blue), "Project Gamma" (purple) in the top row, and "Project Delta" (dark blue), "Project Epsilon" (yellow), "Project Zeta" (red) in the bottom row. Below this is a large orange rectangular area. To its right, the text "Hi, I'm Person Name." is displayed, followed by a smaller note: "I build websites and apps. I try to make them easy to use and keep things simple." Further down, there is a section titled "What I use" containing four boxes: "HTML5" (Building web pages), "CSS3" (Layout and design), "JavaScript" (Adding features), and "Responsive" (Working on phones). At the bottom, there is a form titled "Say hello" with fields for "Name", "Email", and "Message", and a "Submit" button. A copyright notice "© 2026 Person Name" is at the very bottom.

Task1 (Mobile View)

The mobile view of the website displays a sidebar with the user's name and a navigation menu icon. Below this, a section titled "My Projects" shows six colored boxes representing different projects: Project Alpha (teal), Project Beta (blue), Project Gamma (purple), Project Delta (dark blue), Project Epsilon (yellow), and Project Zeta (red). Each project box contains its name. A light gray sidebar on the right contains a bio for "Person Name". The main content area features a heading "What I use" followed by four cards: HTML5 (Building web pages), CSS3 (Layout and design), JavaScript (Adding features), and Responsive (Working on phones). At the bottom, there is a "Say hello" form with fields for Name, Email, and Message, and a "Submit" button. The footer contains a copyright notice: "© 2020 Person Name".

Testing Documentation:

Testing Overview

The responsive business homepage was evaluated conceptually based on the project requirements and implemented CSS rules. The verification focused on ensuring that media queries, Flexbox layouts, and responsive features were structured correctly according to the defined breakpoints. The testing process was theoretical and based on reviewing the implemented code logic rather than performing real-device testing.

Breakpoint Verification

The layout behavior was reviewed according to the specified screen ranges:

- **Desktop (1200px and above):**
 - The services section is designed as a three-column layout.
 - The testimonials section appears in two columns.
 - The footer contains four flex items arranged horizontally.
- **Tablet (768px to 1199px):**
 - The layout adjusts using media queries to reduce column widths.
 - Content spacing adapts to maintain readability.
- **Mobile (320px to 767px):**
 - The navigation menu converts into a hamburger menu.
 - Services and testimonial cards stack vertically.
 - Footer sections align in a single column format.
- **Print Layout:**
 - Non-essential elements such as navigation and buttons are hidden.
 - The layout simplifies for clean print output.

Responsive Feature Verification

The following features were verified through code structure analysis:

- Viewport meta tag included for mobile scaling
- Flexbox properties applied (justify-content, align-items, flex-wrap)
- Images configured with max-width: 100% for proportional resizing
- Typography defined using scalable units
- No fixed-width elements causing overflow
- Buttons designed with minimum height for touch interaction
- Media queries structured using a mobile-first approach

Task-2

Description:

Responsive Portfolio Gallery

Objective

Design a responsive portfolio showcase using Flexbox and media queries for optimal viewing.

Requirements

Build

- Create a responsive portfolio gallery that works across all devices.

Media Queries Implementation (Must Include All)

- **Desktop layout:** 1200px and above
- **Tablet layout:** 768px to 1199px
- **Mobile layout:** 320px to 767px

Task Set - 3

- Print stylesheet for printing optimization

Flexbox Layout Requirements

- Header with personal branding using display: flex
- Portfolio grid using Flexbox:
 - 3 columns (desktop)
 - 2 columns (tablet)
 - 1 column (mobile)
- About section with image and text using flex alignment
- Skills section with 4 skill cards using Flexbox

Responsive Features Required

- Portfolio images resize and reflow appropriately
- Navigation menu adapts to mobile with a hamburger menu
- Text content adjusts font sizes across breakpoints
- Skill cards stack on smaller screens
- Contact form remains usable on all devices

Technical Implementation

- Viewport meta tag for mobile optimization
- Flexible media using CSS techniques
- Flexbox properties:
 - flex-direction
 - flex-grow
 - align-items
- Mobile-first responsive design approach
- Accessible touch targets for mobile users

Deliverables

- HTML file with portfolio structure
- CSS file with Flexbox and media query implementation
- Device testing screenshots (desktop, tablet, mobile)
- Responsive design testing checklist

Code:

Testing Documentation:

Testing Overview

The responsive portfolio gallery was conceptually evaluated to ensure that Flexbox layout rules and media queries were correctly implemented. Verification was performed through structural review of HTML and CSS design rather than physical device testing.

The evaluation focused on responsiveness, layout transformation, and content adaptability across defined breakpoints.

Breakpoint Verification

- **Desktop (1200px and above):**
Portfolio grid displays three columns.
Skills section displays four cards in a row.
About section uses horizontal flex alignment.
- **Tablet (768px to 1199px):**
Portfolio grid adjusts to two columns.
Skills cards rearrange appropriately.
Layout spacing is optimized for medium screens.
- **Mobile (320px to 767px):**
Portfolio items stack into a single column.
Skills cards stack vertically.
Navigation converts into a hamburger menu.
About section changes to vertical alignment.
- **Print Layout:**
Navigation and interactive elements are hidden.
Layout simplified for readability.

Responsive Feature Verification

The following were validated based on implementation:

- Flexbox used for grid layout and alignment
- Media queries applied for three major breakpoints
- Flexible images and scalable content
- Navigation adaptability for smaller screens
- Contact form structured for usability across layouts
- No horizontal scrolling caused by fixed widths
